

Malik Zhang

Product Designer

Product Designer bridging HCI and Industrial Design, designing physical and digital products since 2021, experienced in UX research, interaction design, and AI-native product development, with two solo-shipped apps live on the App Store.

EXPERIENCE

Spatial Editor – Capstone Project

New Paradigm for XR Text Input

Designed a new interaction paradigm for text input in XR, rethinking current high-friction methods through faster, multimodal alternatives.

- Identified text input as XR's highest-friction task through a competitive teardown of 2 input methods
- Observed 8 Vision Pro and Quest users and ran interviews to map real-world friction patterns
- Prototyped 2 interaction concepts in Xcode, converging on a multimodal model that pairs predictive AI with gaze-led targeting
- Validated the model with 10 users in usability testing

Moti: Plan · Oryne

Two iOS Apps Shipped Solo to the App Store

Designed and built Moti, an AI-native planning tool, and Oryne, an inspiration-capture app built on frictionless, category-free thought capture.

- Developed with SwiftUI and SwiftData, using on-device Apple Intelligence to organize captured thoughts privately, without cloud processing.
- Localized end-to-end for the Chinese market with a 257-key, human-reviewed Simplified Chinese localization

NeuraLyfe

FigBuild 2026 · 1st Place of 690 Teams · \$10K Grand Prize

Designed an AI-enabled neurotechnology decision-support system that translates helmet impact data into real-time neurological risk insights for sideline medical staff.

- Structured the diagnosis flow into three progressive views so non-specialist staff can act within seconds
- Prototyped real-time risk monitoring in Figma Make, pairing live sensor data with AI-generated summaries
- Encoded neurological metrics into visual signals readable at a glance

Aura

Motion Sickness Relief System

Designed a sensor-driven wearable that reduces motion sickness through anticipatory sensory feedback, intervening before symptoms onset.

- Reframed relief from reactive treatment to anticipatory care, using real-time HRV data to detect early autonomic stress before discomfort begins
- Designed the sensing-to-feedback loop, triggering 100 Hz sound stimulation grounded in published vestibular research on motion sickness
- Defined the wearable form factor for inflight use, balancing sensor placement against long-haul wear comfort

WORK

UW MHCI+D

Technology and Equipment Manager

- Designed an online inventory system to streamline access to equipment
- Supported prototyping and equipment access for student design work
- Maintained studio technology operations for project development

Sep 2025–Present

Seattle, WA

IKEA

UX Designer Intern

- Contributed to UX design work for retail and service experiences
- Supported research and concept development across user-centered initiatives

Mar–Aug 2025

Hangzhou, China

Focused Photonics Inc.

Product Designer Intern

- Contributed to form and interaction design for monitoring devices
- Translated technical requirements into usable product concepts

Jun–Sep 2024
